Dear Hiring Team,

I am writing to express my enthusiastic interest in the Simulation Engineer position advertised on your company website. With over a decade of experience in the oil and gas industry, particularly in analysis and simulation, I believe my expertise positions me as an ideal candidate to contribute effectively to your company.

In my current role as a Lead Simulation Engineer at Baker Hughes, I have honed my skills in Finite Element Analysis (FEA) and have successfully overseen numerous projects ensuring compliance with stringent industry standards such as ISO 13628-7 and DNVGL 2.7-3, API 6A/17D. My responsibilities include:

- Conducting linear elastic and plastic analyses using Ansys Mechanical to validate the structural integrity and functionality of offshore structures and pressure containment equipment under various operational conditions. This has involved developing comprehensive formal reports for third-party reviews to ensure all deliverables meet or exceed expectations.
- Performing fatigue and buckling analysis for subsea connectors and spools, thereby identifying potential failure points and implementing design modifications that enhance overall performance and safety.
- Collaborating with cross-functional teams to create functional design specifications tailored to project requirements, which has resulted in improved project turnaround times and elevated product quality.

I take pride in my ability to transform complex engineering challenges into feasible solutions through effective simulation. My technical proficiency with software tools such as ANSYS, Abaqus, and MATLAB complements my programming skills in Java and Python, allowing me to develop simulation models that accurately reflect real-world scenarios.

Thank you for considering my application. I have attached my resume for your review and would be excited about the opportunity to discuss how my qualifications can contribute to the success of your team.

Sincerely,
Quan Vo
